

AERO-100 Maintenance Manual

AERO-100 Synthetic Aviation Documentation

1.1 General Maintenance Principles

Maintenance activities on the AERO-100 aircraft should be performed by appropriately trained personnel using the applicable approved maintenance documentation.

Before maintenance begins, the aircraft should be placed in an appropriate maintenance condition and relevant systems should be isolated where required.

Maintenance personnel should verify that required tools, equipment, replacement components, and documentation are available before beginning a maintenance task.

2.1 Hydraulic System Maintenance

The AERO-100 hydraulic system provides hydraulic power to selected aircraft systems and components.

Routine hydraulic system maintenance includes inspection of hydraulic lines, fittings, reservoirs, connections, and associated components.

Maintenance personnel should investigate visible hydraulic fluid leakage before returning the affected system to service.

2.2 Hydraulic Fluid Leakage

When hydraulic fluid leakage is identified, maintenance personnel should determine the approximate source of the leakage and inspect nearby fittings and hydraulic lines.

Damaged or deteriorated hydraulic components should be assessed in accordance with the applicable maintenance procedure.

Aircraft systems should not be returned to normal operation until the identified maintenance issue has been appropriately addressed.

3.1 Engine Maintenance

Engine maintenance activities should follow the applicable engine maintenance procedure.

Maintenance personnel should inspect accessible engine components for visible damage, abnormal conditions, and signs of deterioration.

Any abnormal finding should be documented and assessed using the appropriate maintenance process.

4.1 Maintenance Documentation

Maintenance activities and significant findings should be documented in accordance with the organization's approved maintenance recording process.

Records should contain sufficient information to support traceability of maintenance actions and findings.
