

AERO-100 Operations Manual

AERO-100 Synthetic Aviation Documentation

1.1 Aircraft Operating Philosophy

The AERO-100 is a fictional narrow-body aircraft used in this research prototype.

Flight crew should operate the aircraft using applicable operating procedures, checklists, and approved operational guidance.

2.1 Pre-Flight Preparation

Before flight, the flight crew should complete the applicable pre-flight preparation activities.

Required aircraft documentation, operational information, weather information, and aircraft status should be reviewed before departure.

2.2 Pre-Flight Aircraft Inspection

The pre-flight aircraft inspection should include a visual assessment of relevant external aircraft areas and accessible components.

Any abnormal condition identified during the inspection should be reported and evaluated before flight.

3.1 Abnormal Operating Conditions

When an abnormal aircraft condition occurs, flight crew should follow the applicable checklist and operational procedure.

Crew members should communicate relevant information and maintain awareness of aircraft status throughout the event.

4.1 Communication

Effective communication between flight crew and relevant operational personnel supports safe and coordinated aircraft operations.

Operational information should be communicated using established organizational procedures.
